A guide to Prof. Alfred Tomatis´ method Jozef Vervoort & Astrid Vervoort 2017

Jozef was born with a "helper's syndrome", as his father liked to say. As an elementary school teacher, Jozef was constantly looking for the best methods to help every child. He studied a lot to become a special teacher for children with special needs, in the normal school. His own son, born with hypoxia, was the reason of integrating the Tomatis method and therapy in his schools over the period of 10 years. In 1983, he has created the non-profit organization Atlantis VZW and, in 2000, he has opened Mozart-Brain-Lab. In these institutes more than 31,000 children and more than 12,000 adults have been treated with Tomatis method. In 2015, 2790 children received the therapy that averaged 50 hours. In the period between 2002 and 2016, 165 new therapists, from all over the world, came to the institutes to learn the method and open their own Tomatis centres in their countries. Helping children is Jozef's real passion.

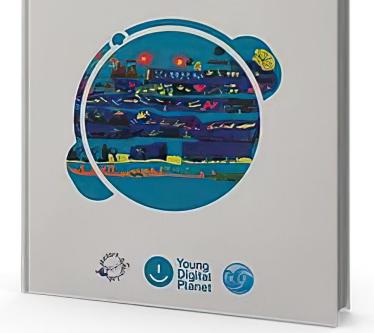

Astrid Vervoort

Astrid was the first person that received the Tomatis method in the womb of her mother: every day, during an-hour-and-a-half session, over the period of whole nine months. Born with a great tonus, she developed remarkable motor and language skills. All her life she has been "a sunshine" — always happy and, with an outstandingly big heart, ready to help children and adults. She has learnt the basics of psychology and speech therapy, but she has studied to become a special needs teacher in an elementary school. All these talents are most useful in helping all the children, their parents, and adults. Every day, Astrid is actively using her talents in Atlantis and Mozart-Brain-Lab institutes.

As a result of the strong positive trend concerning inclusive education promoted by UNESCO, teachers and parents are looking for alternative methods and treatments to implement in schools. 40 years of hands-on experience and research undertaken by the VZW Atlantis Institute and Mozart-Brain-Lab in Sint-Truiden, Belgium show the promising effects of the Alfred Tomatis Method in improving children's cognitive skills. The audio-psycho-phonology (APF) described in this book tries to explain how to understand and implement the therapy. All reports in this guide are based on case studies, demonstrating general improvement in cognitive and psychological disorders, including but not limited to autism, ADHD, dyslexia, Down syndrome, epilepsy and anorexia nervosa. In Poland, the therapy has been introduced by Young Digital Planet SA in more than 200 schools and psycho-pedagogical centers with promising results, with improvement in the executive functions and language and emotional skills, all of which are necessary for children to reach their true potential.

LISTEN to LIVE – our Brain and Music Martien de Voigt & Jozef Vervoort 2018

This book describes how the quality of life can be improved by exploiting the central role of the hearing organs from the astonishing discoveries of Professor Alfred Tomatis.

This textbook can be considered as a standard work to establish the proper execution of the original Tomatis method. It pays tribute to Tomatis' pioneering work. It provides an insight into why and for what disabilities the method works so well. A wealth of scientific validations (e.g. EEG brain maps) and cases are presented to illustrate this as an aid for practitioners as well as for potential clients and to convince the outside world. Details encompass anatomy, neurology, and physiology, pathology, psychology along with interpretations of listening tests, programming and equipment. It serves both therapists and clients, as well as generally interested persons and medical or educational institutions.

Dieses Buch beschreibt, wie sich die Lebensqualität und die Gesundheit verbessern, wenn man die erstaunlichen Entdeckungen von Professor Alfred Tomatis über die zentrale Rolle des Ohres für unser Funktionieren nutzt. Dieses Buch kann als **Standardwerk** für die regelgerechte Durchführung der originalen Methode Tomatis angesehen werden. Es würdigt die Leistung von Tomatis Pionierarbeit und gibt einen Einblick in das Warum und für welche Störungen und Beeinträchtigungen diese Methode so gut hilft. Das Buch präsentiert eine große Anzahl wissenschaftlicher Validierungen um den Therapeuten und ihren Patienten eine erklärende Basis zu geben und Überzeugungsarbeit für die Öffentlichkeit und die Fachwelt zu leisten. Die Details umfassen Anatomie, Physiologie und Neurologie, außerdem Pathologie und psychologischen Aspekte, darüber hinaus werden die Interpretation des Horchtests sowie das Programmieren und die erforderlichen Geräte besprochen. Die Arbeit ist eine große Stütze für Therapeuten und kann auch allen Interessierten sowie medizinischen oder pädagogischen Instituten als Informations- und Nachschlagewerk dienen.

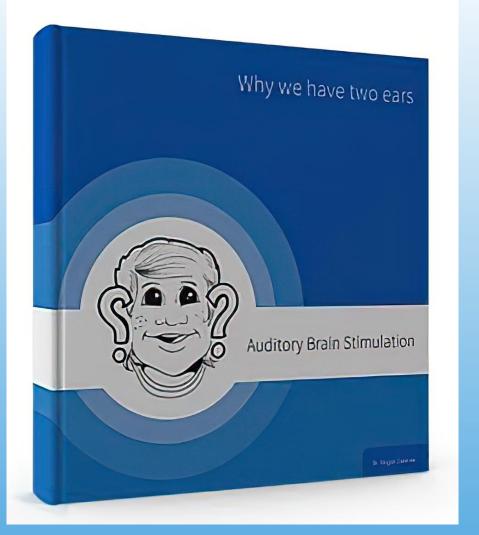

Die Autoren haben außerordentliche Erfahrung in der Anwendung der Therapie. Jozef Vervoort, der von Professor Alfred Tomatis zu seinem Nachfolger bestimmt wurde, leitet seit mehr als 40 Jahren ein Horchzentrum. Seit kurzem teilt er sich diese Arbeit mit seiner Tochter Astrid, die seine Nachfolge antreten wird. Jozef Vervoort steht außerdem an der Spitze des großen MBL-Tomatis-Netzwerks und leitet das Mozart-Brain-Lab. Martien de Voigt und seine Frau Ann arbeiten in enger Kooperation mit Herrn Vervoort und können auf mehr als 25 Jahre Erfahrung mit der Therapie verweisen. Von ihnen und zahlreichen anderen Therapeuten wurden insgesamt 45 000 Fälle erfolgreich behandelt.

The adventures of Amadeus « Tomatis book for children » Astrid Vervoort 2020

Ella the duck quacks non-stop but fortunately she never loses her balance. She's really good!

The guided tour continues. Along the way, they come across several friendly therapists. Amadeus notices that everyone is smiling. All of his worries seem to have melted like snow in the sun. No more butterflies in his stomach, either. Everything will be fine, he is sure of it.

Before going downstairs, they enter a small empty room containing nothing but a computer screen and a mole sitting in front of it wearing dark sunglasses. The mole turns around, frowns and squints trying to see who has just entered. "Who is there?" asks the mole. completely forgets about herself. Mama Owl should also

have a good time!
